

CLAIMS:

1. In combination with a media disc having a label face,  
a media retrieval face and a central aperture extending  
5 between said faces, a flexible wrapping covering both said  
faces and extending through the aperture to seal the media  
disc.
2. The combination of Claim 1 wherein the flexible  
10 wrapping comprises an upper sheet covering the label face  
and a lower sheet covering the media retrieval face,  
wherein the upper sheet is attached to the lower sheet at  
the disc aperture and wherein neither the upper sheet nor  
the lower sheet extend fully across the aperture.
- 15 3. The combination of Claim 2 wherein the upper sheet is  
secured to the lower sheet at a periphery of the media  
disc.
- 20 4. The combination of Claim 2 wherein the flexible  
wrapping is a shrink-wrapped and wherein the upper sheet  
is attached to the lower sheet at the disc aperture by  
heating.
- 25 5. In combination with the combination of Claim 1, a  
beverage cup lid having a central boss passing through the  
central aperture of the media disc.

6. The combination of Claim 5 wherein the central boss has a protrusion over which the media disc snaps to secure the media disc to the lid.

5 7. The combination of Claim 6 wherein the central boss has a slitted opening through which a straw can pass.

8. In combination with the combination of Claim 1, a beverage cup lid having a peripheral lip within which the  
10 media disc snaps to secure the media disc to the lid.

9. The combination of Claim 8 having a slitted opening through which a straw passing through the central aperture of the disc can pass.
